

Measured false bridges: 20 + 6 + 1 wrong relationships

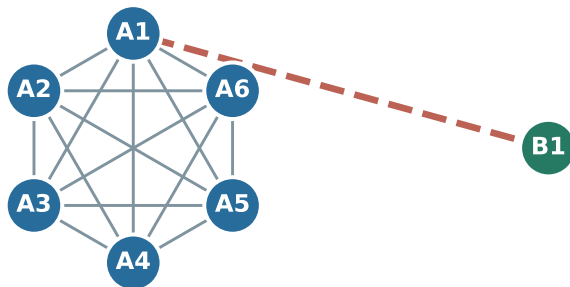

All three false-merge components from the LLM-trained matcher on held-out FEBRL3

Component 1: 5 + 4 records

1 false edge $\rightarrow 5 \times 4 = 20$ false pairs

Component 2: 6 + 1 records

1 false edge $\rightarrow 6 \times 1 = 6$ false pairs

Component 3: 1 + 1 records

1 false edge $\rightarrow 1 \times 1 = 1$ false pairs

● Reference entity A ● Reference entity B - - False accepted bridge

Nodes and solid edges are reconstructed from the saved predictions; record labels are relabeled within each panel.

Connected-component closure asserts every cross-entity pair. The three panels contain all 27 false relationships in the full test.
